

VERSION 10

More powerful, even more
user-friendly features.

V.10 2022

Simple, yet significant

NEW LOOK. NEW TOOLS. BETTER PERFORMANCE.

Complete tasks faster, gain a better view of your data and feel confident that you're running your restaurant with the latest technology.

The new design offers a streamlined experience that's better suited for today's digital world.

The changes are subtle enough that you can easily navigate through familiar screens with minimal effort, but you'll notice a lighter design and newly optimized ways to get your job done faster.

FUTURE-PROOF YOUR BUSINESS

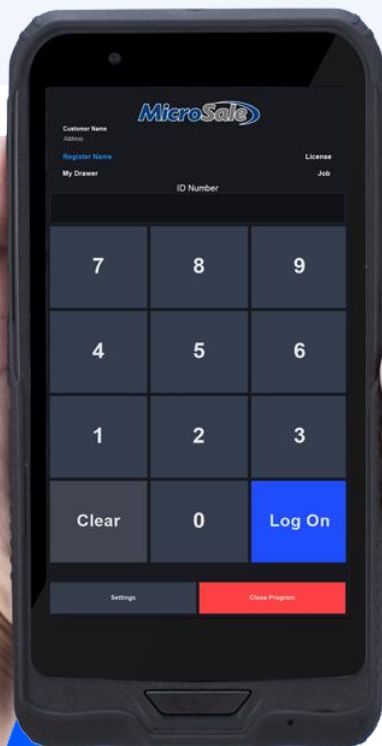

New ways to accept orders, more revenue

New, minimal design Self-service kiosk

Lower wait times, eliminate lines and get through lunch with less employees.

Redesigned with a clean, minimalist style to make order entry quick and simple.

- ✓ Turn any Windows device into a kiosk
- ✓ Customize backgrounds and buttons
- ✓ Upload languages and custom voice prompts
- ✓ Email receipts

Take orders on the move New tablet interface

Version 10 includes two built-in tablet interfaces; choose between traditional landscape or portrait-mode.

The Windows-based tablet application is substantially lighter, running up to 2x faster than the standard software.

Why portrait-mode?

The new vertical-style layout is designed for small-form tablets. Easily interact with the software using one hand.

[Compatible with Windows Devices](#)

SECURE YOUR BUSINESS WITH EMV

Get mobilized, secure, and the latest payment technology

Enjoy quick transaction speeds using the EMV chip reader of your choice - gain peace of mind with secure yet flexible solutions.

Accept contactless payments

Delight your customers by accepting contactless payments.

- ✓ Chip, tap, swipe
- ✓ Apple Pay, Google Pay, Samsung Pay

Pick the processor right for you

PAX and Datacap support nearly every EMV device and processor available in the US.

Eliminate processing fees

Version 10 supports both available cash discount programs on the market.

- ✓ Automatic discount for cash payments
- ✓ Surcharge for credit card payments

Accept modernized ways to pay

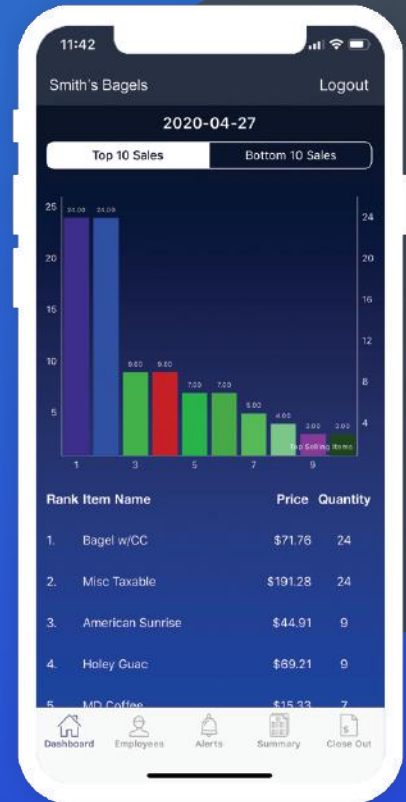

- ✓ Using a pay at the table device, your customers can settle the bill without ever losing sight of their card
- ✓ QR Code Payments is a pay-at-the-table solution that uses the guest's phone to pay the bill

CLOUD REPORTING

All your restaurant's data in the palm of your hand

Subscribe to ReportingAnywhere to track your day's progress with live data streaming on your smartphone.

The ReportingAnywhere package includes a website for detailed reports and a simplified real-time app available on the App Store and Google Play.

REPORTING & BACK OFFICE UPDATES

Make fast, easy decisions with clear, understandable data

Choose who receives reports via email

You can now create recipient groups and decide who receives your sensitive data via email. You may want General Managers to receive payroll data while Shift Leaders receive only sales information.

Transaction Review: find data faster

All previous weeks' financial data is automatically itemized in a selection list, saving multiple steps as you no longer have to go through backup files.

Easily count cash in the safe

After the closeout runs, it prompts to enter the amount in the safe, providing additional accountability to help track your cash on-hand.

Track cash for servers without banks

Servers can now take cash payments on any register with a cash drawer while accounting for the cash payments on their individual audit (shift report).

Automatically calculate shared tips

Group Audits have been designed to simplify tip distribution between bartenders, saving managers hours per week.

Complete end-of-shift tasks faster

Quicker tip entry

[NEW] Tip List allows you to enter tips one after another in a spreadsheet view.

[ENHANCED] Apply Tip button: Instead of exiting after a tip is added, a list of all closed checks immediately prompts to add additional tips at one time.

Quicker manager access

Managers can now log into the system without clocking in or having an open audit. This change makes it more efficient when managers need to assist staff with manager-restricted tools.

Quicker shift closing

Any employee can now close an audit assigned to a cash drawer; this change is beneficial in establishments that use generic audits such as "AM Shift".

New Integrations

This one-way integration imports data from MicroSale into QuickBooks. The integration automatically imports financial data directly into QuickBooks.

Compeat provides integrated Accounting, Back Office, Workforce and Intelligence portfolio in one place.

EMPLOYEE MANAGEMENT & PAYROLL UPDATES

Refined & reworked time keeping for full transparency over your labor

MAJOR ENHANCEMENT

Automated Payroll Close

You no longer have to run a payroll close in the software.

The automated payroll close significantly improves the software across all facets.

- ✓ Payroll automatically sends to your provider.
- ✓ Save time and no longer worry about when you need to run your payroll. Eliminates all potential corruption that can occur when the payroll is not regularly closed.

Prevent time discrepancies

Employees are prompted at the end of their shift with their shift details including total hours worked, clock in time and clock out time.

See all hours worked for the pay period

Only shifts worked for the current week or pay period display onscreen, so there is never a question on hours.

Prevent overpayments

If someone forgot to clock out, they are prompted to see a manager before clocking in for the next shift; preventing overpayments and ensuring accuracy.

Easily edit times for forgotten clock outs

Employees who forgot to clock out push to the top of the time clock editor, allowing managers to easily view and edit the time before payroll is due.

Lock-down employees' time clock permissions

You can set bartenders to clock in and out freely, while forcing manager approval for cooks or delivery drivers.

Peace-of-mind with daily backups

Never worry about lost data: time records automatically backup every night.

New Integrations

Restaurant Employee Scheduling Software. Make scheduling, timesheets, team communication, task and tip management, and labor compliance easy. www.7shifts.com

Schedule the right people at the right time and reduce labor costs. HotSchedules Powered by Fourth gives you everything you need for total workforce scheduling. www.fourth.com

IMPROVED WORKFLOW

New shortcuts, Boosted efficiency

Version 10 is packed full of shortcuts to reduce staff's computer time. New shortcuts include faster split payments, auto-voiding from the order screen, and multi-ring next round capability.

Smarter Search

Easily search through checks: the flexible search options allow you to search by table number, customer name or check number.

Easily find items: Previously, the search required a match on the few letters typed. Now, simply type in any part of the name and all matching items populate.

Cash out individual seats instantly

You're busy – especially when a party is trying to cash out. Now you can take payments on individual seats directly from the order screen, bypassing the payment screen completely.

Split all items in a single tap

Simply enter how many times you want to share an item to automatically split everything by that denomination on separate seats.

Re-ring multiple drinks at once

Quickly ring in multiple drinks in one tap and repeat or edit attached modifications.

Void & close a check instantly

You can now void all items off an open check to automatically void and close the entire ticket.

Make higher tips with preset tip percentages

As an optional setting, you can rotate the POS screen during checkout for a customer to choose a preset tip amount from the large, easy-to-read options.

Prompt servers' drinks at the bar station with Berg

Using a Berg Liquor Control System, drinks entered from the server stations will now automatically populate on the bartender's terminal and unlocks the controls to make the drink.

Prevent walkouts & speed up checkout

Useful in bars and breweries, you can attach a credit card to a table to eliminate the stress of potential walkouts and provides your customer with a quick option when ready to cash out.

Easily delete single line items

Delete any line item (menu item or modifier) without having to delete the entire item and re-enter it before sending to the kitchen.

Simplified course ordering

Course ordering is now completely automated. Items are preprogrammed to specific courses, if an item needs to be changed, simply switch the course using the "change course" button.

Email customer receipts

You can now email receipts. Find out how you're doing by attaching a survey link.

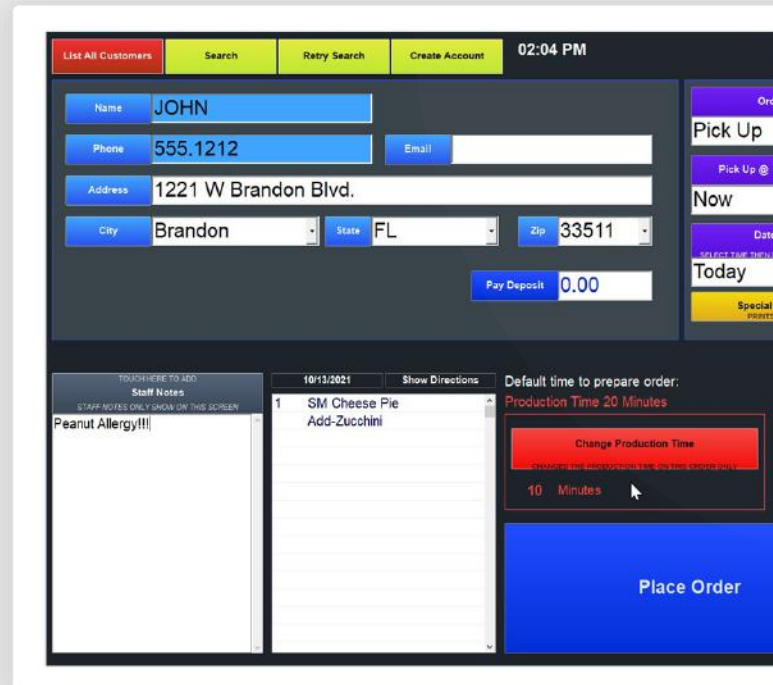

PHONE ORDER & TAKEOUT UPDATES

New look, new tools, Streamlined takeout

With a new design and streamlined functionality, you'll be able to take orders faster and more easily than ever before.

Highlights

- ✓ Customer profiles are now linked by phone number only (previously by name or number), preventing duplicate profiles.
- ✓ Improved search for phone orders: you can now search by any criteria such as address or number.
- ✓ Effortlessly pay separately on one call-in order, with the new shortcut, Pay by Bag.
- ✓ Easily reconcile third-party delivery payments when using a tablet for receiving orders and the POS for tracking sales; Now you can label orders for UberEats, DoorDash, etc., to more clearly reconcile sales.

New Integrations

Enter addresses faster with 100% accuracy

For phone orders, customers' addresses auto-complete to speed up entry and prevent mistakes.

Assign orders to drivers from the on-screen map to see stops closest together for the most efficient delivery routes.

Accept third-party delivery orders directly in MicroSale

Orders placed through third-party delivery platforms automatically flow into your MicroSale system through Chowly's gateway.

Get years of free updates

MicroSale is an evolving software solution that continues to improve with every release. Updates are developed and released for two to three years after a major version launch so that you can get the most out of your investment.

About MicroSale

KIS Software Db a MicroSale POS is a hospitality focused software platform specializing in quick service, full service, bars, and pizzerias.
